INVENTOR'S CERTIFICATE OF THE USSR NO. 729761

PUBLISHED ON APRIL 25, 1980.

The document discloses a method of manufacturing of magnetic guides of electrical machines, which includes stamping of sheets with slots, assembling of the magnetic guide, and forming passages with a variable transverse cross-section. In accordance with the invention disclosed in this document, in order to improve the method of manufacturing, in each sheet the slots are provided with alternating profiles, they are arranged in correspondence with a sequence of alternation in a pack, and during the assembly the sheets are turned relative to one another by a slot pitch until the slots of different profiles coincide with one another.

This reference does not disclose the new feature of the present invention as defined in the claims.

INVENTOR'S CERTIFICATE OF THE USSR NO. 951,574
PUBLISHED ON AUGUST 15, 1982.

This document discloses a method of manufacturing magnetic guides of electrical machines. The method includes making external and middle sheets with slots, assembling a pack from the external and middle sheets, applying an insulation coating on an end surface of external sheets and on a slot surface of the pack. In accordance with the invention disclosed in this reference, in order to increase quality of manufactured goods due to increase of

the layer of the insulating coating on sharp edges of the external sheets, the external sheets are formed with slots of a greater cross-section than the cross-section of the slots of the middle sheets, for example by a thickness of one sheet, before the assembly of the pack the insulating coating is applied on the outer end surfaces of the external sheets and on the slot surfaces until a cross-section of the slot of the external sheets is obtained, which corresponds to a cross-section of the slot of the middle sheets with the insulating coating.

This reference also does not disclose the new features of the present invention as defined in the claims.
